Lesson 1: The Entrepreneur's Dilemma - Why Most Startups Require Huge Capital and High Risk

You're here because you dream of more than a 9-to-5. You want to build something of your own, call the shots, and create a life of freedom and purpose. That ambition is exactly what sets you apart.

But you're also cautious. You've heard the stories or seen the statistics: most new businesses fail. You worry about high startup costs, wasting years on trial and error, and the risk of losing everything.

I want to tell you that your caution isn't a weakness—it's a strength. You're right to be wary. The traditional path to entrepreneurship is paved with risks that most people don't see until it's too late.

The Reality of "Proven" Business Models

Let's talk about what it really takes to start a "normal" business.

A while ago, a business partner of mine was excited about opening a Ya Kun Kaya Toast franchise. His friend owned several profitable outlets, so it seemed like a sure bet. But when he looked into the numbers, the reality was staggering: over **\$200,000 in startup costs** plus a hefty royalty fee of nearly 10% of his revenue every year. The dream of owning a cool cafe quickly faded when faced with the financial burden.

Even ventures that seem less complex come with massive upfront capital and risk. I once explored starting a General Practitioner (GP) clinic with a friend. The initial investment was **\$650,000**. After running the numbers, we realized that even if the clinic generated \$1 million in revenue per year, the net profit would only be around \$10,000 a month after covering rent, salaries, and other costs. The breakeven period? **Five to six years**, and that's if everything went perfectly.

The Trap of "Buying Yourself a Job"

Sometimes, the risk isn't just financial. It's about trading one grind for another, more stressful one.

I once considered buying a pain clinic located in a prestigious shopping center. It had a revenue of \$500,000 a year, but the owner's take-home profit was only \$80,000. He wanted to sell the business for \$500,000, meaning it would take over six years just to break even.

But the worst part? The owner was doing everything himself—front desk, operations, sales, and service delivery. If I had taken over, I wouldn't have been a business owner; I would have just bought myself a very expensive, high-stress job.

This is the entrepreneur's dilemma: the path to freedom is often blocked by the need for huge capital, the fear of failure, and the risk of simply creating a new cage for yourself.

You are right to hesitate before jumping into that world. But what if there was a different way? A path that gives you the upside of entrepreneurship—the income, the freedom, the impact—without the crippling upfront risk?

That's what the rest of this program is about. In the next lesson, we'll explore a "franchise model" that doesn't require a \$200,000 fee and allows you to start building your business from day one, cash-flow positive.

Lesson 2: The Franchise Model - The Franchise Model

Without the \$200,000 Fee

In the last lesson, we established a critical truth: your caution around starting a business is justified. The path of a traditional entrepreneur is often loaded with massive upfront costs and years of high-stakes risk.

But what if you could access a proven, successful business model without the crippling financial barrier?

Think about the most recognizable brands in the world: McDonald's, Subway, Old Chang Kee, or Ya Kun. What makes them so powerful? It's not just their products; it's their **franchise system**. A franchise is essentially a "shortcut" to becoming a business owner. The frameworks, branding, marketing plans, and operations are already built for you. You don't have to start from scratch; you simply "buy" a proven model and duplicate its success.

The financial advisory career operates on this exact same principle. You don't need to build a financial company from the ground up, create your own insurance or investment products, or spend millions on research and development. The entire business infrastructure has been built for you over decades.

You get to leverage the credibility of a major brand like AIA from day one. It's a "business-in-a-box."

But here is the game-changing difference that sets this opportunity apart from every other franchise out there: **the risk is reversed**.

The Traditional Franchise vs. The Financial Advisory Model

Let's break down the comparison:

When I first started my journey at 21, I didn't realize it, but I was essentially starting my own business—one that didn't come with the same terrifying upfront costs in terms of time and capital. Even if the career didn't work out, the worst-case scenario was that I'd walk away with invaluable knowledge about personal finance, communication, and sales.

Your Role: The Driver, Not the Engineer

The company has already done the heavy lifting. They've handled the decades of hiring, the millions in R&D, and the brand building. Your job isn't to build the car from scratch; it's to get in the driver's seat.

And to make sure you know how to drive, you get something else a traditional franchise doesn't offer: a personal mentor. After nearly a decade in this industry, I've already created the proven scripts, templates, and marketing resources for you. My goal is to share the lessons from my struggles so you don't have to go through them yourself.

This is what we mean by a "business-in-a-box." It's a proven model with minimal risk, designed to shortcut your path to success.

In the next lesson, we'll dive into the high-income skills you'll build that will serve you for life, no matter where your journey takes you.

Lesson 3: More Than a Job - An Incubator for High-Income Skills

So, we've established that this career is a "business-in-a-box"—a proven franchise model without the crippling financial risk.

But the opportunity here is much deeper than just a low-risk business model. This career is one of the most powerful and accessible incubators for developing the high-income skills that are essential for any form of entrepreneurship.

Think of it this way: A 9-to-5 job pays you to perform a function. This career pays you to grow into a builder, an operator, and an entrepreneur. The business acumen I gained to build four other companies was only possible because of the foundation I built right here in the financial advisory industry.

Even if you decide this isn't your forever path, the skills you learn will stay with you for life. Let's break down the top three.

Skill #1: Sales & Influence (It's Not What You Think)

Most people hear the word "sales" and think of pushy, aggressive tactics. That's not what we do. I believe **selling is not a soft skill; it's a life skill.**

Every successful entrepreneur, leader, or innovator is a master of sales. They have to sell their vision to investors, sell their product to customers, and sell their mission to their team.

Here, you won't just learn how to close clients. You will learn how to build. We teach:

- **Sales Psychology:** Understanding what drives people to make decisions.
- **Branding & Lead Generation:** How to attract opportunities instead of chasing them.
- **Conviction & Storytelling:** How to communicate value so clearly that the "sale" becomes the natural next step.

Most advisors are taught to sell products. I will teach you how to build conviction, culture, and systems.

Skill #2: Communication & Building Trust

Being a great talker isn't what makes you successful. In fact, I'm an introvert by nature and even had a stammering problem when I started.

What's far more important is your ability to **listen**.

Clients don't want someone who talks *at* them. They want someone who understands their fears, listens to their goals, and asks the right questions. In this career, you will master the art of building deep, trust-based relationships. This is the foundation of all successful ventures, whether you're managing a team, negotiating a partnership, or building a loyal customer base.

Skill #3: Financial IQ (The Education School Forgot)

This is your ultimate unfair advantage.

Financial planning isn't taught in schools. Most people are left to figure out money on their own, often through painful and expensive mistakes. Most entrepreneurs learn about cash flow, investing, and risk management the hard way—by nearly losing their business.

Here, you get paid to learn it.

You will gain a deep understanding of how money truly works: how to manage it, how to protect it, and how to make it grow. This financial intelligence is the bedrock of wealth creation and will give you a massive head start in any business you decide to build in the future.

The Ultimate "No-Lose" Scenario

This career is one of the most accessible vehicles to build income, communication skills, and leadership with no upfront capital. It's a guided path where the backend and operations are handled for you, so you can focus purely on your own growth.

When people join me, they don't just get a job. They get a future.

In the next module, we'll explore the three pillars that this career is built on: **Income, Independence, and Impact.**

Lesson 4: The "Risk-Reversal" Card

Life is like a casino.

You enter with a set of cards you can't change—your background, your environment, your natural talents. You use these cards to place bets on the right education, the right job, the right business.

Bet on the wrong job? You're stuck in the rat race. Bet on the wrong business? You lose your hard-earned money and years of your life. Every choice comes with risk.

But what if I told you that you're holding a new card right now? A card that changes the game entirely.

I call it the **"Risk-Reversal" Card**.

This is my promise to you, and it's the foundation of this entire program. It's a bet where you simply cannot lose.

Let's break it down.

Scenario 1: You Win

You commit to this journey, you plug into the systems, you put in the work, and you succeed. What does "winning" look like?

- **You build the career of your dreams.** One of high income, complete autonomy, and the flexibility to live life on your own terms.
- **You achieve financial freedom.** You're not just earning a paycheck; you're building scalable, compounding income streams that work for you.
- **You create a life of impact.** You become a leader, a mentor, and a source of guidance for others, helping them achieve their own financial goals.

This is the grand prize. It's the reason you're here. It's a life of purpose, ownership, and freedom that most people only dream of.

Scenario 2: You "Lose"

Now, let's imagine the "worst-case" scenario. You go through the program, you learn the ropes, but you decide that a long-term career as a financial advisor isn't the right fit for you.

You "lose" the bet. What do you walk away with?

- **Priceless Financial Knowledge.** You will have gained a deep understanding of personal finance, investing, and wealth management that schools never teach. You'll become the money-savvy person in your circle of friends, equipped to make smart financial decisions for the rest of your life.
- **A Toolkit of High-Income Skills.** You will have been trained in sales, communication, negotiation, and influence—skills that are transferable and highly valuable in *any* business or career you choose to pursue.
- **Profound Personal Growth.** You will have developed discipline, resilience, and the grit that only comes from stepping outside your comfort zone. You'll be a more confident and capable version of yourself.

So, let me ask you: if the "worst-case" scenario leaves you with a powerful education and a stronger mindset, is it really a loss?

This is what makes this opportunity an **asymmetrical bet**. The potential upside is life-changing. The "downside" is still a massive win.

There are no contractual obligations that lock you in. There are no financial penalties. You can quit anytime if it doesn't work out.

The only real risk is not trying.

You are holding the risk-reversal card. The question is, are you ready to play it?

In the next module, we will dive deeper into what "winning" looks like by exploring the three pillars of this career: **Income, Independence, and Impact.**

Lesson 5: The Hidden Math of Your: Why Not All Businesses Are Created Equal

One of the most deceptive parts of entrepreneurship is that the promise of flexibility and autonomy can often lead to you working more hours for less pay. Not all hustle is created equal, and understanding the math behind your time is the single most important factor in choosing the right business to build.

Your true hourly rate isn't just your commission divided by the hours you spend in meetings. It's the total value you earn from a customer, divided by the *entire* time it takes to acquire and serve them.

Let's break this down with a real-world example.

The Interior Designer: A Case Study in Hidden Costs

During my residency, I spoke to an interior designer. He was great at sales and loved his work, but the business model was slowly burning him out.

First, his income was unpredictable and severely delayed. He had closed one project nine months ago, but the client was still waiting for their keys. With the project itself lasting another 2-3 months, he was looking at a **full 12-month wait** to collect his full commission.

Second, the post-sales headache was immense. He would spend hours in meetings that went nowhere and was constantly bogged down by project management.

So, we did the math on his hourly rate.

The Assumptions:

- **Average Commission:** \$3,000 (10% of a \$30k project).
- **Time to Close One Sale: 25 hours** (including prep, 3 meetings, and proposal work).
- **Time for Project Management: 50 hours** (coordinating with clients and contractors).

The Calculation:

It took him a total of **75 hours of work** to earn \$3,000.

His effective hourly rate? Around \$40 per hour.

And the worst part? There's almost no repeat business. A client renovates their home once every 5-10 years. He was constantly starting from zero.

The Financial Advisor: A Model Built on Leverage

Now, let's run the numbers for the financial advisory business.

The Assumptions:

- **Time to Close One Case: 15 hours** (including 6 hours of calling, 6 hours of prep, and 3 hours of meetings).

Notice what's missing? The 50+ hours of post-sales project management.

The beauty of this business is that once the policy is sold, the company handles the fulfillment. The fund managers grow the money, and the claims department pays it out. You don't need to hire a project manager or spend money on R&D. Your time is freed up to focus on the next client.

Furthermore, this business is built on **Lifetime Value (LTV)**. With back-end commissions, bonuses, and repeat business from clients you serve well, the average value per customer over time is significant. After nearly a decade in this industry, I've found the average LTV per customer works out to be around **\$10,000**.

The Calculation:

You spend **15 hours of work** to earn a lifetime commission of **\$10,000**.

Your effective hourly rate? \$667 per hour.

(Granted, this doesn't include time for upskilling and training, but the difference is staggering.)

Why This Math Changes Everything

When you understand your hourly rate, your entire business strategy shifts. You start asking the right questions:

- If my time is worth \$667/hour, should I hire someone for \$10/hour to handle lower-level tasks? (Yes.)
- How much am I willing to invest to acquire a customer with a \$10,000 LTV?
- Why is it so important to follow up and provide excellent service?

Because the math will always work out in your favor. My competitors, who are stuck in the old model of trading time for money, won't be able to invest as much as me or wait as long as me. In this business, you win by playing the long game. And it all starts with choosing a model where your time is leveraged, not just spent.

Lesson 6: Stickiness & Recurring Revenue

The "Stickiness" Factor: Why This Business Model Is Built to Last

In the last lesson, we uncovered the powerful math behind your hourly rate. But what makes that high Lifetime Value (LTV) possible in the first place?

The answer lies in a concept that separates fleeting businesses from enduring empires:

Stickiness.

Take a look at the most successful companies you interact with every day. You'll quickly notice a pattern. They don't make their money from a single purchase. They build systems for recurring revenue.

- **Apple:** Sells you an iPhone, then gets you on iCloud subscriptions and convinces you to upgrade every few years.
- **Netflix & Adobe:** Lock you into a monthly subscription for their services.
- **Starbucks:** Turns a one-time coffee purchase into a daily ritual.

Successful businesses are masters of making their customers buy and use their services repeatedly. This "stickiness" is what drives up their LTV. To Starbucks, you're not just a single \$5 coffee. You are the sum of every coffee you'll buy for the next decade.

Understanding this, it becomes profitable for them to spend millions on marketing, branding, and perfecting their coffee. They are investing in a long-term relationship, not a one-time transaction.

My Own Struggle with Stickiness

This is a lesson I had to learn the hard way.

One of the biggest challenges I faced when building my digital marketing agency was the problem of stickiness. With a growing number of cheaper freelancers and competing agencies, it was incredibly difficult to make my customers stick. While some clients stayed for years, most would drop off after 6 to 12 months. I was constantly on a treadmill, trying to replace the clients I lost.

Now, contrast that with the financial advisory industry.

This business model has stickiness built into its very DNA.

Most customers stick around for **decades** due to the long-term nature of insurance and investment policies. A retirement plan isn't something you buy and cancel in six months; it's a commitment that spans a lifetime.

This creates a powerful foundation for your business. But it gets even better.

As you continue to serve your clients well, they will naturally reach out to you for new solutions as their lives evolve. They get married, buy a house, have children, or get a promotion—and each of these life events creates a new need and an opportunity for you to add value.

You aren't just making a single sale. You are building a portfolio of clients whose value compounds over time through repeat business and referrals. You're not on a treadmill; you're planting an orchard that will bear fruit for years to come.

This is how you build a real, sustainable business—not just a series of transactions.

Lesson 7: The Scalability Advantage: How to Grow Without the Grind

In the last lesson, we talked about "stickiness" and how this business is designed for long-term client relationships. But a business that keeps clients forever is useless if you can't handle the growth.

This brings us to one of the most critical, yet overlooked, aspects of choosing the right business: **Scalability.**

Most businesses, especially service-based ones, eventually hit a ceiling. Growth, ironically, becomes the very thing that breaks them.

The Service Business Trap: More Sales = More Problems

Let's go back to my interior designer friend. Every time he closed a new project, he wasn't just celebrating a win; he was adding another 50+ hours of draining project management to his plate.

He admitted that he couldn't handle more than five projects at once. This created a painful bottleneck: the more sales he made one month, the less time he had for sales the next. His income was permanently capped by the number of hours in his day.

I learned this lesson myself while scaling my digital marketing agency. With a team of 40 people managing 200 client retainers, I realized that as our revenue grew, so did our costs and complexity. Hiring more people led to a logistical nightmare of miscommunication, HR issues, and shrinking profit margins.

This is the trap of most businesses that require both sales and delivery. Your success becomes your own bottleneck.

Your Unfair Advantage: A Business That Scales Like Software

The beauty of the financial advisory industry is that it's designed to break this rule. You can grow your client base without being crushed by the weight of fulfillment.

Here's how:

You Have a Built-In Team (That You Don't Pay For)

1. From day one, you have a massive team of specialists working for you: underwriters, fund managers, customer service representatives, product managers, and brand managers. The company hires and pays them, but you get the benefit. They handle the complex, time-consuming work behind the scenes.

Your Product Delivery is "Done-For-You"

2. Once a policy is in place, your job isn't to "manage the project." The insurance money pays out upon a claim, and the investment grows because a team of professional fund managers is handling it.

Your primary focus is on one thing: **acquiring new customers**.

You can keep focusing on sales, month after month, without worrying about hitting a delivery wall. This is why, even with over 1,000 clients, I only need two virtual assistants to help me manage the administrative side.

It's a SAAS Model in Disguise

3. This career can be likened to a "Software as a Service" (SAAS) business, like Adobe or Netflix.

Why? Because SAAS companies are incredibly scalable. The cost to serve one additional customer is almost zero. The same software can be used by 100, 1,000, or 10,000 customers without a proportional increase in costs or complexity.

In this business, the "product" and "service" are delivered by the company's massive infrastructure. This allows you to add new clients to your portfolio with minimal additional effort, freeing you to do what you do best: build relationships and grow your business.

This is the secret to building a truly scalable enterprise—one where you can achieve exponential growth without the exponential stress.

Lesson 8: The Three “Is” of The FA Career

There are three I's of this career. **Income, Independence, Impact**

Income

The average student advisor earns around \$61,198 per year.

My income as a full-time student, and a part-time financial advisor cross \$100k in my first year, despite just working 20-30 hours a week and having no natural market (most of my clients were complete strangers). Thankfully, I created the right systems and processes to make things as efficient as possible.

Based on salary.sg, the average salary of a financial consultant, manager and insurance director ranks amongst the top 10.

The average income of a consultant has also been increasing steadily year on year.

And you can promote as a manager and director and build your own team in the future, with increasing levels of income

I earned \$145k as a Uni Y1 Full Time Engineering Student, Year 1 in Career.

Independence

One of the greatest appeals of a financial advisory career is the unparalleled level of control it offers.

Want to focus on family in the mornings and meet clients in the afternoons? This career offers the autonomy to shape your day as you see fit.

Because of the flexible nature of this career, I am also able to control my time.

As a student advisor, I was mainly just occupied with my lectures, homework and tutorials during the day. All I had was the weekday evenings to work on this business. Unlike a corporate job, this job gives me the freedom to do the things that matter the most to me.

I was a full-time Engineering Student (on the Global Engineering Program, meaning I was cramming and overloading each semester).

I also had no natural market (99.9% of my leads are cold)

Most of my time was spent prospecting, calling, setting appointments and travelling. But the total number of hours I spent per week was approximately, 20 hours, if you don't count the travelling time.

Impact

Financial planning isn't taught in schools, which means the majority of people are left to figure it out on their own. That's where we come in.

Our job isn't just to sell insurance or investment products. It's to educate, guide, and empower people to take control of their financial futures. We help them:

- **Escape the rat race:** By building wealth and passive income streams, clients can free themselves from the endless cycle of trading time for money.
- **Achieve job security:** True security comes from having financial independence, not from relying solely on an employer.
- **Protect their livelihoods:** Insurance provides a safety net, ensuring clients and their families are secure no matter what life throws their way.

When you focus on serving others, you'll start to realise that this job is very meaningful.

We are providing financial solutions that are the cornerstone of everyone's financial portfolio.

Further, we also help our customers consolidate, and review all their policies in our GoalsMapper financial software.

Lesson 9: The Broken System Most Agencies Won't Tell You About

Let me be direct with you.

You've decided that financial advisory is the right path. That's the smart choice. But now you're faced with an even more critical decision: **which agency to join.**

Most people think all agencies are the same. They couldn't be more wrong.

I've been in this industry for nearly a decade. I've seen hundreds of talented, ambitious people join the wrong agencies and flame out within their first year. Not because they weren't capable, but because they were set up to fail from day one.

The traditional agency model is fundamentally broken. And I'm going to show you exactly why.

The Three Lies Most Agencies Tell New Advisors

Lie #1: "Just Sell to Your Friends and Family"

This is the first thing most agencies will tell you: "Make a list of 100 people you know." They call it your "warm market," and they'll convince you it's the foundation of your business.

Here's the truth: **your warm market is a crutch, not a strategy.**

Yes, your friends and family might buy from you initially because they trust you. But what happens after that? You've got maybe 50-100 people in your network, and once you've approached them all, you're done. Your pipeline dries up, your relationships become awkward, and you're left wondering where your next client will come from.

I learned this the hard way. In my early days, I exhausted my warm market within months. I had to figure out how to build a real business in the cold market—with complete strangers. That's where the real opportunity is, but most agencies will never teach you how to get there.

Lie #2: "Culture and Vibes Will Carry You"

Walk into most agencies and they'll sell you on their "family culture" and team bonding activities. They'll show you motivational videos and talk about how "positive energy" will drive your success.

Don't get me wrong—culture matters. But **culture without systems is just expensive cheerleading.**

I've seen too many advisors get hyped up at weekend retreats, only to return to their desk on Monday with an empty calendar and no idea how to fill it. Motivation fades. What you need are predictable systems that generate results whether you feel motivated or not.

Lie #3: "Figure It Out Yourself"

Most agencies operate on a "sink or swim" mentality. They'll give you a desk, a phone, and maybe some outdated training materials, then expect you to figure out the rest.

You're expected to:

- Generate your own leads
- Book your own appointments
- Handle your own admin and paperwork
- Create your own marketing materials
- Manage your own follow-ups

Essentially, you're not just an advisor—you're an unpaid marketer, administrator, telemarketer, and operations manager all rolled into one.

This is insane.

You didn't sign up to become a one-person circus. You signed up to help people with their finances and build wealth for yourself. But when you're drowning in low-value tasks, you have no time or energy left for the work that actually generates income.

Why I Built Something Different

After experiencing this broken system firsthand, I made a decision: **I would never put another advisor through what I went through.**

I spent years building the infrastructure, systems, and support that I wish I'd had when I started. Not because I'm a nice guy (though I hope I am), but because I believe in using business to build people, not using people to build business.

The result is what we call the **Advisor OS**—a complete operating system that handles everything the traditional agencies leave you to figure out alone.

Lesson 10: The 4 Traits We're Looking For - Are You Built Like This?

Most agencies find anyone.

We care about **four traits** that predict success better than any qualification:

1. **Speed of Execution**
2. **Continual Improvement**
3. **Consistency**
4. **Resourcefulness Over Resources**

Let's break down what we're actually looking for.

Trait #1: Speed of Execution

What this means:

You can take action at the speed of thought.

Most people operate like this:

1. Have an idea
2. Think about it for days
3. Analyze all possible outcomes
4. Seek validation from others
5. Wait for the "perfect moment"
6. **Never execute** (or execute so late the opportunity is gone)

We're looking for people who operate like this:

1. Have an idea
2. Take action within 24 hours
3. Learn and adjust as you go

It's Not Big Fish vs. Small Fish. It's Fast vs. Slow.

The myth: You need to be the smartest, most talented, best-connected person to succeed.

The reality: Speed beats perfection.

Example 1: The Two Recruits

Recruit A (The Planner):

- Spends 2 weeks researching "the perfect CRM system"

- Reads 10 articles on "best cold calling scripts"
- Watches 15 YouTube videos on "sales techniques"
- Finally ready to start calling leads... 3 weeks later
- **Result:** Made 50 calls in Month 1, set 2 appointments

Recruit B (The Executor):

- Day 1: "I don't know what I'm doing, but let me just start calling"
- Uses whatever script we gave him (even if it's not "perfect")
- Makes mistakes, gets rejected, adjusts on the fly
- **Result:** Made 500 calls in Month 1, set 15 appointments

Who succeeded? Recruit B.

Why? Because he was willing to look stupid, fail publicly, and learn through action rather than theory.

Taking Action Despite Limiting Beliefs

Most people have limiting beliefs that paralyze them:

- "I'm not good at sales"
- "I don't have a network"
- "I'm too old/young"
- "The market is saturated"
- "I need more training first"

People with speed of execution think differently:

- "I'm not good at sales... **yet. Let me make 100 calls and see what happens.**"
- "I don't have a network... **so I'll build one. Let me run ads starting today.**"
- "I'm too old... **or maybe my age is an advantage. Let me test it.**"
- "The market is saturated... **or maybe I just need a better approach. Let me try cold email.**"
- "I need more training... **or maybe I just need to start and learn as I go.**"

The difference:

Average person: **Belief** → **Inaction**

Fast executor: **Belief** → **Action** → **New belief based on reality**

Real Example: The Weekend Calculator

Saturday morning:

I saw a competitor district post a financial calculator on social media. It was getting tons of engagement.

Saturday afternoon:

I built our own version. Took 4 hours. Used ChatGPT to write the code, customized it, tested it, deployed it.

Sunday morning:

Shared it with the team. Agents started using it in client meetings immediately.

Monday:

Three agents closed deals using the calculator as a value-add tool.

Total time from idea to revenue: 48 hours.

Could I have made it "perfect"? Sure. I could've spent 2 weeks refining the design, adding features, A/B testing.

But by then: The momentum would be gone. The competitor would've captured all the attention. The opportunity would've passed.

Fast is better than perfect.

What We're NOT Looking For

- ✗ Perfectionists who overthink everything
- ✗ People who need 100% certainty before acting
- ✗ Those who wait for permission or validation
- ✗ Chronic researchers who never implement
- ✗ People who say "let me think about it" for everything

What We ARE Looking For

- ✓ Bias toward action (even imperfect action)
- ✓ Willing to fail publicly and learn quickly
- ✓ Can make decisions with 60-70% information (not 100%)
- ✓ Experimental mindset ("Let me test this and see")
- ✓ Move fast, break things, fix them, move faster

The Speed Test

Here's how we identify fast executors in interviews:

Question: "If you join us tomorrow, what's the first thing you'd do?"

Slow executor: "Uh... I'd probably read through all the training materials first, then maybe shadow some senior agents, then after a few weeks I'd start reaching out to my warm market..."

Fast executor: "I'd ask for the lead list and start calling immediately. Even if I mess up, at least I'll know what I don't know. Then I'd watch training videos at night to fix my mistakes."

Who do you think will do better?

Trait #2: Continual Improvement

What this means:

You're obsessed with getting better. Every day. Every week. Every month.

Most people plateau after learning the basics. They get comfortable. They coast.

We're looking for people who never stop improving.

If the Religion of Church Is God, Our Religion Is Consistent Improvement

I go to church every week. My faith is important to me.

But in this business, our faith is in continual improvement.

What this looks like practically:

- **After every client meeting:** "What could I have done better?"
- **After every rejection:** "What did I say that turned them off?"
- **After every successful close:** "What worked? How can I replicate this?"
- **Weekly review:** "What's my conversion rate? How can I improve it by 5%?"
- **Monthly review:** "What new skill should I learn this month?"

Coachable and Hungry to Learn

We're looking for people who:

 **Take feedback without getting defensive**

Bad response to feedback:

Mentor: "Your pitch is too product-focused. You need to ask more questions about their goals first."

Agent: "But this approach worked for my last client..."

Good response to feedback:

Mentor: "Your pitch is too product-focused. You need to ask more questions about their goals first."

Agent: "Got it. Can you show me an example of what that sounds like? I'll try it in my next meeting."

✓ **Actively seek feedback (don't wait for it)**

Passive learner: Waits for annual review to hear how they're doing

Active learner: After every JFW session, asks "What's one thing I could improve for next time?"

✓ **Experiment with new approaches**

Fixed mindset: "This is how I've always done it."

Growth mindset: "Let me try this new objection-handling framework and see if it works better."

✓ **Have humility**

Arrogant agent: "I've been in sales for 10 years. I know what I'm doing."

(Quits after 6 months because they refused to adapt)

Humble agent: "I've been in sales for 10 years, but financial advisory is different. Teach me everything from scratch."

(Hits MDRT in Year 1 because they absorbed everything like a sponge)

The Ownership Mindset

When something goes wrong, who do you blame?

Low performers blame external factors:

- "The leads were bad"
- "The market is down"
- "My clients don't have money"
- "The training wasn't good enough"
- "My manager didn't support me"

High performers take ownership:

- "I didn't qualify the leads properly before calling"
- "I need to adjust my pitch for this market environment"
- "I'm targeting the wrong client demographic"
- "I didn't review the training materials enough"
- "I didn't ask my manager for help when I needed it"

The difference:

Blaming = Victim mentality = No power to change

Ownership = Growth mindset = Full power to improve

Real Example: The Agent Who Couldn't Close

Month 2:

Agent had 10 appointments, closed 0 deals.

Low-performer response:

"These leads are terrible. They're not serious buyers."

What this agent actually did:

"Something's wrong with my approach. Can I record my next meeting and have you review it?"

We reviewed the recording.

The problem: He was talking 80% of the time, asking questions 20% of the time. Clients felt "sold to" rather than "consulted."

The fix: We gave him a question framework. "Ask these 10 questions first. Don't pitch until you understand their situation."

Month 3:

Same lead quality. 12 appointments, closed 5 deals.

What changed? He took ownership, sought feedback, implemented changes.

What We're NOT Looking For

- ✗ Know-it-alls who think they've figured it all out
- ✗ Defensive people who can't take criticism
- ✗ Excuse-makers who blame external factors
- ✗ Complacent people who plateau after initial success
- ✗ Ego-driven individuals who need to be right

What We ARE Looking For

- ✓ Humble learners who admit "I don't know"
- ✓ Feedback seekers who actively ask "How can I improve?"
- ✓ Experimenters who try new approaches
- ✓ Ownership-takers who say "This is on me"
- ✓ Never-satisfied improvers who always want to level up

The Improvement Test

Here's how we identify continual improvers in interviews:

Question: "Tell me about a time you failed. What did you learn?"

Red flag answer: "I haven't really failed at anything major..." (either lying or lack of self-awareness)

Good answer: "I failed at [specific situation]. I realized I was [specific mistake]. So I [specific action to improve]. Now I [specific result]."

Great answer: "I failed at [situation]. At first I blamed [external factor], but then I realized I was actually [taking ownership]. I sought feedback from [mentor/peer], implemented [specific change], and now I [measurable improvement]."

Trait #3: Consistency

What this means:

You show up and do the work, regardless of how you feel.

Most people are emotional. When they feel motivated, they work hard. When they don't feel motivated, they coast.

We're looking for people who are robotic in their consistency.

Ability to Take Hard Knocks

This career will punch you in the face. Repeatedly.

- Week 1: You make 100 calls, 95 people hang up on you
- Week 2: You finally get 3 appointments, all 3 cancel
- Week 3: You sit down with a client, they love your pitch, then... "I need to think about it"
- Week 4: You close your first deal! (Finally!) ... then the client lapses after 2 months

Low performers: Get discouraged after each setback, take days off to "recover emotionally," momentum dies.

High performers: Expect setbacks, process them quickly, keep moving.

Don't Let Success Get to Your Head or Failure Get to Your Heart

The Two Extremes (Both Bad):

Type A: The Quitter

- Has 2 bad weeks → "This isn't for me. I quit."
- Gets rejected 10 times in a row → "I'm just not good at sales."
- Doesn't hit target one month → "Maybe I should go back to corporate."

Type B: The Burnout

- Has 1 great month → "I'm the best! I've figured it out!"
- Gets complacent, stops prospecting
- Next month: 0 closings → Panics → "What happened?!"

What we're looking for: Emotional Stability

Bad month:

"Okay, numbers are down. Let me analyze: Was it my activity level? My pitch? My lead quality? Let me adjust and keep going."

Great month:

"Awesome, hit my targets. But let me not get complacent. What can I improve next month? How can I scale what's working?"

Even-keeled. Not reactive. Process-oriented.

Not Complacent. Always Better.

The Plateau Problem:

Most people hit a certain level and stop improving:

- "I'm making \$10K/month, that's good enough"
- "I closed 3 deals this month, same as last month, I'm consistent"
- "I've learned the basics, I don't need more training"

What we're looking for:

- "I'm making \$10K/month. How do I get to \$15K?"
- "I closed 3 deals at 20% close rate. How do I get to 30%?"
- "I've learned the basics. What's the next level?"

There's no arrival point. Only the next milestone.

Getting Shit Done Despite Your Emotions

Most people operate like this:

- **Feel motivated** → Work hard
- **Feel unmotivated** → Scroll social media
- **Feel confident** → Make calls
- **Feel insecure** → Avoid prospecting
- **Feel energized** → Set 5 appointments
- **Feel tired** → Take the day off

Their results: Inconsistent. Up and down. Unreliable.

We're looking for people who operate like this:

- **Monday:** "I don't feel like calling today. Too bad. 50 calls."
- **Tuesday:** "I'm tired. Doesn't matter. 50 calls."
- **Wednesday:** "I got rejected 20 times already. Keep going. 50 calls."
- **Thursday:** "I feel amazing today! Still. 50 calls." (don't over-extend just because you feel good)
- **Friday:** "End of week, I'm exhausted. Push through. 50 calls."

Their results: Consistent. Predictable. Reliable.

Real Example: The Tennis Player Mentality

I was a competitive tennis player before this career.

Here's what tennis taught me:

When you win a match: Don't celebrate too long. There's another match tomorrow. Stay humble. Keep training.

When you lose a match: Don't sulk. Analyze what went wrong. Adjust. Train harder. Next match.

The only thing that matters: Did you put in the work today, regardless of yesterday's result?

This is the consistency we're looking for.

What We're NOT Looking For

- ✗ Emotional rollercoasters (high highs, low lows)
- ✗ Motivated by feelings (only work when inspired)
- ✗ Celebrate too early (one good month = "I've made it!")
- ✗ Give up too quickly (one bad month = "This doesn't work")
- ✗ Need constant external motivation (pump-up speeches, events)

What We ARE Looking For

- ✓ Emotionally stable (don't let results dictate mood)
- ✓ Process-oriented (focus on daily actions, not results)
- ✓ Long-term thinkers (12-month view, not 12-day view)
- ✓ Self-motivated (don't need cheerleading to show up)
- ✓ Resilient (bounce back from setbacks quickly)

The Consistency Test

Here's how we identify consistent performers in interviews:

Question: "Tell me about a time you had to do something you really didn't want to do, but did it anyway. What kept you going?"

Red flag answer: "I usually just push through when I'm motivated..." (relies on emotion)

Good answer: "I set a goal to [X]. Some days I didn't feel like it, but I'd already committed. So I just showed up and did the minimum." (discipline beats motivation)

Great answer: "I committed to [X] for 90 days. I tracked it daily. On bad days, I reminded myself: this is just one data point. The trend matters, not one day. So I showed up regardless of how I felt." (systems + long-term thinking)

Trait #4: Resourcefulness Over Resources

What this means:

You don't need everything handed to you. You figure things out.

Most people say: "I can't do X because I don't have Y."

- "I can't run ads because I don't know Facebook Ads Manager"
- "I can't call leads because I don't have a good script"
- "I can't close deals because I don't have enough product knowledge"

We're looking for people who say:

- "I don't know Facebook Ads Manager... **so I'll watch 3 YouTube videos tonight and figure it out.**"
- "I don't have a good script... **so I'll use the basic template we gave, test it, and iterate based on what works.**"
- "I don't have enough product knowledge... **so I'll study 2 hours every evening until I'm confident.**"

Able to Ask the Right Questions to Get What You Want

Low resourcefulness:

Sits in confusion. Waits for someone to spoon-feed answers. Gives up if answers aren't immediately obvious.

High resourcefulness:

Asks clarifying questions. Seeks out resources. Experiments. Finds creative solutions.

Example: The Two Agents

Agent A:

"I don't know how to handle this objection. I'll wait until the next training session to ask."
(Training session is 2 weeks away. He loses deals in the meantime.)

Agent B:

"I don't know how to handle this objection. Let me:

1. Search the database for 'price objection'
2. Ask the AI chatbot
3. Watch past JFW recordings for examples
4. If still stuck, message the mentor directly"

(Finds the answer in 20 minutes. Closes the deal the next day.)

Not Just Following Instructions - Taking Initiative

We give you systems, tools, frameworks.

Low resourcefulness:

Uses exactly what we give. Nothing more. Waits for instructions on everything.

High resourcefulness:

Uses what we give as a starting point, then customizes and improves it based on their specific needs.

Example: The Lead Gen System

We provide: Subsidized Facebook ads, pre-approved creative, 3-click launch system

Agent A (Low resourcefulness):

Launches 1 campaign. Gets 20 leads. Waits for instructions on what to do next.

Agent B (High resourcefulness):

Launches 3 campaigns. Gets 60 leads. Analyzes which ad performed best. Doubles down on the winner. Creates a spreadsheet tracking cost-per-lead by demographic. Messages the team: "I found that Retiree ads perform 2X better than General Public ads. Should we all shift budget there?"

Who do you think we want on the team?

Going Beyond What Is Expected or Given

We provide 1,000 leads.

Low resourcefulness:

Calls through the 1,000. "I'm out of leads. What now?"

High resourcefulness:

Calls through the 1,000. Then asks: "Can I scrape LinkedIn for more leads in my target demographic? Can I partner with other agents to trade leads? Can I run my own ad campaigns in addition to the subsidized ones?"

The difference: Initiative.

Example: The Creative Solutions

Problem: Agent wanted to target corporate executives but our ads weren't attracting that demographic.

Low resourcefulness response:

"The ads aren't working for my target market. I guess I can't reach executives."

What this agent actually did:

"Can we create a premium lead magnet? Like a '10-Page Executive Wealth Management Guide'? I'll write the content if your team can design it."

Result:

We built it in 48 hours. He ran it. Cost per lead was higher (\$30 vs. \$5), but close rate was 3X higher because they were qualified executives.

ROI: He didn't complain about what we didn't have. He asked for what he needed, contributed to building it, and executed.**

Questioning, Not Just Following

We're not looking for robots who blindly follow orders.

We're looking for thinkers who:

- Understand the "why" behind instructions
- Ask clarifying questions when something doesn't make sense
- Challenge assumptions respectfully ("Have we tested this approach vs. that approach?")
- Suggest improvements ("What if we tried X instead?")

But there's a balance:

✗ Too compliant: "You said do A, so I did A, even though I saw it wasn't working."

✓ Right balance: "You said do A. I tried it, and here's what I'm seeing. Should I adjust, or keep testing?"

✗ Too rebellious: "I don't want to do A. I'll do my own thing." (ignores proven systems)

What We're NOT Looking For

- ✗ Learned helplessness ("I can't do anything until someone teaches me")
- ✗ Excuse-makers ("I don't have X, so I can't do Y")
- ✗ Passive waiters (wait for instructions on everything)
- ✗ Rigid followers (only do exactly what's told, no creativity)
- ✗ Complainers ("This tool doesn't work the way I want")

What We ARE Looking For

- ✓ Problem-solvers ("I don't have X, so I'll figure out how to get X or find an alternative")
- ✓ Question-askers ("I don't understand why we do Y. Can you explain the reasoning?")
- ✓ Initiative-takers ("I noticed a gap. Here's a solution I'm proposing.")
- ✓ Creative adapters ("The standard approach isn't working for my niche. Let me test a variation.")
- ✓ Self-educators ("I don't know how to do Z yet. I'll learn it this weekend.")

The Resourcefulness Test

Here's how to identify someone resourceful in an interview:

Question: "Tell me about a time you wanted to achieve something but didn't have the resources. What did you do?"

Red flag answer: "I couldn't do it because I didn't have [resource]." (victim mentality)

Good answer: "I didn't have [resource], so I found a workaround: [creative solution]." (problem-solving)

Great answer: "I didn't have [resource]. First, I asked if there was a way to get it. There wasn't. So I researched alternatives, tested [A, B, C], found that [B] worked even better, and now I use that approach." (persistence + experimentation + optimization)

Putting It All Together: The Ideal Candidate

If you have ALL FOUR traits:

- ✓ **Speed of Execution:** You take action immediately, learn fast, iterate quickly
- ✓ **Continual Improvement:** You seek feedback, take ownership, never plateau
- ✓ **Consistency:** You show up regardless of emotions, handle setbacks, stay even-keeled
- ✓ **Resourcefulness:** You solve problems creatively, ask smart questions, take initiative

You're exactly who we're looking for.

And with our 4-level support system, you'll dominate this industry.

What If You Don't Have All Four?

Can you develop these traits?

Yes, but it requires intentional effort.

Speed → Can Be Learned

- Start with small commitments: "I'll make 10 calls today, no matter what"
- Use timers: "I'll decide on this in 5 minutes, then act"
- Embrace imperfection: "I'll launch at 70% ready instead of waiting for 100%"

Continual Improvement → Can Be Cultivated

- Join communities focused on growth (not just socializing)
- Read books on learning (e.g., "Mindset" by Carol Dweck)
- Find a mentor who challenges you (not one who only validates)

Consistency → Can Be Built

- Track daily activities (20-point card system)
- Set non-negotiable minimums ("No matter what, I'll do X")
- Study stoicism (Marcus Aurelius, Epictetus) - emotional control

Resourcefulness → Can Be Developed

- Practice "figure-it-out" thinking: Before asking for help, spend 15 minutes trying to solve it yourself
- Study how successful people solved problems with limited resources (biographies, case studies)
- Experiment more: Try 3 approaches before declaring "it doesn't work"

But here's the catch:

You can't fake these traits long-term.

If you're not naturally inclined toward speed, improvement, consistency, and resourcefulness, **this career will expose that within 6 months.**

The Bottom Line

We're not looking for:

- The most experienced
- The best-connected

- The most educated
- The most charismatic

We're looking for:

- **The fastest** (action beats perfection)
- **The hungriest** (always improving)
- **The most consistent** (show up daily, regardless of feelings)
- **The most resourceful** (figure it out, don't wait for handholding)

Because here's the truth:

Experience can be gained.

Connections can be built.

Education can be acquired.

Charisma can be developed.

But character traits are much harder to change.

If you don't have speed, improvement, consistency, and resourcefulness, **all the training in the world won't save you.**

If you DO have these traits, **we can turn you into a top producer in 12 months.**

Self-Assessment: Do You Have What It Takes?

Answer these honestly:

1. **Speed:** When you have an idea, do you execute within 24-48 hours, or do you "think about it" for weeks?
2. **Improvement:** When you fail, do you blame external factors, or do you immediately ask "What can I do better next time?"
3. **Consistency:** On days when you don't feel motivated, do you still show up and do the minimum required actions?
4. **Resourcefulness:** When you encounter a problem, do you wait for someone to solve it for you, or do you try to figure it out yourself first?

If you answered "YES" to all four:

You're our ideal candidate. Let's talk.

If you answered "NO" to 1-2:

You can develop these. But you need to be intentional about it. Join us, but know you'll need to work on these weak areas actively.

The Invitation

We're not recruiting hundreds of people.

We're recruiting a handful of the right people.

If you:

- Act fast
- Improve constantly
- Show up consistently
- Solve problems resourcefully

Then you belong on this team.

And with our systems, you'll build a multiple 6-figure business within 3-5 years.

Are you built like this?
